SAINT-GOBAIN

Available in
12mm & 16mm

Glass-fibre
reinforced composite

Innovative
corner key system

High Performance. Smart Value.

Swisspacer Advance strikes the perfect balance between price and performance. Its low thermal conductivity boosts the energy efficiency of insulated glass units, delivering significantly lower Psi values than metal spacers — for superior U_w values in windows and façades. Higher edge-of-glass temperatures reduce the risk of condensation and mould, while CO₂ savings contribute to sustainable, future-ready building solutions.

Why is Swisspacer Different?

Durable

Built with high-quality long-lasting materials

Enhanced Thermal Performance

Reduces heat transfer and condensation

Aesthetics

Revolutionary corner key enabled spacer bar for perfect alignment and finish

Versatile

Compatible with diverse glass types and frames

Sustainable

Boosts energy efficiency for spaces and reduces production emissions of insulated glazing units

Energy Efficient

Contributes to significantly lower energy consumption

Swisspacer Air

Small Component. Big Impact.

Height differences and climatic changes can create pressure imbalances in IGUs, leading to stress, glass breakage, or early ageing. Swisspacer Air reduces these risks by equalising pressure between the cavity and the surrounding environment — ensuring greater durability and performance.

Upgrade to Swisspacer Advance.
The warm edge
with the best
price-performance ratio.
